HUMBLE BEGINNING AND A BRIGHT FUTURE AHEAD

It all started in 1987 as a modest maintenance workshop for compactors. Today Stampede has become the leading South African manufacturer of a range of ground and asphalt compaction equipment from its factory located in Isando, Gauteng.

A firm belief in South Africa's future motivated a consortium of investors to buy the company in 2016 with a view to developing Stampede into a world class manufacturing organisation.

The new shareholders injected fresh capital and strengthened the management team which was tasked with streamlining the manufacturing process, increasing productivity and introducing stringent quality controls. The design of the equipment had to remain simple and robust to withstand harsh operating conditions.

This considerable investment and strategic review has placed Stampede on a sustainable growth path and created the capability to expand market share both locally and beyond our borders.

OUR MISSION

Stampedes' vision is to maintain leadership as our customers preferred compaction partner measured in terms of customer satisfaction, of creating value for all our stakeholders and to building a positive relationship with our staff and suppliers. We are committed to conducting our business affairs with integrity and striving to continuously improve.

THE STAMPEDE ADVANTAGE

Our mission statement is in our DNA and in supporting this objective we highlight here a few specific features that illustrate why dealing with Stampede has so many advantages.

- **LOCALLY DESIGNED AND MANUFACTURED**

Stampede is the only South African manufacturer of compaction equipment in its class. The local content of our machines is over 80% and we do not have to remit royalties to overseas principals.

Our in house engineering and design team continuously update and improve our machines. We are not limited by constraints from far away gurus. We are able to react swiftly to customer's requests.

We make use of effective and state of the art technology such as **Syspro** for the management and control of supply chain, **Inventor** for the engineering department (design and simulation testing and quality control protocol). **AdvanceMobility** is used to automate all in-field paper based processes and to centralise data.

- **ROBUST AND SIMPLE EQUIPMENT**

Operating conditions in Africa are often harsh and unforgiving. Construction sites can be in remote and distant areas. Skill levels of operators are not guaranteed (particularly in the rental market). We address this by keeping our designs simple. Our rollers have fewer moving parts and vibratory mechanisms are driven hydrostatically. We make use of robust components and apply proper quality controls during the manufacturing process. We avoid fragile and complex accessories and operating controls. We aim to give our customers peace of mind and we try reduce the risk of down-time.

- **STABLE AND COMPETITIVE PRICING**

Priced in Rand our locally manufactured equipment and most parts are not susceptible to exchange rate fluctuations. Our products are very competitively priced and the total cost of ownership of a Stampede machine is undeniably lower than its competitors.

- **AFTER SALES**

The after sales department has in house workshops and trained technicians to service and repair compaction equipment. It also undertakes complete refurbishment i.e. re-manufacturing of units.

Mobile field service teams are despatched to conduct routine servicing and minor repairs at our customers' construction sites.

- **AVAILABILITY OF PARTS**

Our parts and components department has to ensure the supply flow to the plant and it keeps adequate stock levels to respond to the after sales needs. Being locally manufactured parts are readily available. There is no waiting for shipments to arrive from overseas.

- **WARRANTY**

Notwithstanding their high quality of manufacture, all our machines are backed by a full year warranty program.

- **EXPANDING FOOTPRINT**

Our national footprint is being boosted through new dealership and distribution agreements. Export opportunities are currently being explored to help expand beyond our border.

PRODUCT RANGE

Stampede manufactures and distributes a wide range of ground compaction equipment. The main products are;

- Pedestrian Rollers, also known as Walk Behind Rollers in various sizes
- Ride On Rollers
- Cricket pitch (smooth) Ride on Rollers and Walk behind rollers
- Plate Compactors in various sizes

We also source and supply rammers and other specialist compaction equipment and accessories.
